ABDUL KHALIQ

Independent Al Projects Developer

+923282494559 engrrabdulkhaliq@gmail.com github.com/engrrabdulkhaliq001 Karachi, Pakistan

SUMMARY

Junior Data Scientist | Al Engineer | Python Developer Detail-oriented Junior Data Scientist and Al Engineer with hands-on experience building and deploying end-to-end Al applications using Python, NLP, and Retrieval-Augmented Generation (RAG). Proficient in developing machine learning models, REST APIs, and intelligent automation systems. Passionate about solving real-world problems through data-driven approaches. Actively seeking internship or junior full-time opportunities in Karachi.

EXPERIENCE

Independent Al Projects Developer

Self-Directed

2023 - Present

- Built and deployed Al-powered applications using Python, FastAPI, and NLP techniques.
- Developed Retrieval-Augmented Generation (RAG) systems for intelligent document and video Q&A.
- Created machine learning models for student performance prediction and automated resume screening.
- Designed REST APIs and integrated LLM APIs into real-time, user-facing applications.
- Improved model accuracy by {XX%} by applying data preprocessing, feature engineering, and evaluation across {XX} projects.

Developed an automated resume screening system

Al System

2023 - Present

- Developed an automated resume screening system using TF-IDF vectorization and skill extraction, achieving 87% matching accuracy
- Reduced manual screening effort by approximately 75% through automated candidate-to-job matching logic
- Deployed via FastAPI REST endpoints with an interactive Streamlit frontend on Railway and Streamlit Cloud

Student Performance Predictor

Personal Project

2023 - Present

- Built an XGBoost classification model predicting student performance with 84% accuracy using historical academic data
- Implemented SHAP explainability and interactive visualizations to deliver transparent, actionable insights for educators
- Deployed via FastAPI and Streamlit for real-time predictions and early identification of at-risk students

RAG-Based Al Teaching Assistant

Faiss

2024

- Built an intelligent document Q&A system using LangChain, FAISS, and Groq API for fast semantic retrieval
- Implemented sentence-transformer embeddings to enable accurate, context-aware answers from uploaded content
- Deployed FastAPI backend on Railway with a Streamlit frontend, achieving sub-2-second response times

Self-Directed Learning

EXPERIENCE

Independent AI Projects Developer

Self Employed

2024

- Developed and deployed AI-powered applications using Python, Flask, and NLP techniques.
- Created advanced machine learning models for prediction and automated resume screening.
- Designed and integrated REST APIs with AI models for real-time applications.
- Implemented Retrieval-Augmented Generation (RAG) systems for intelligent document and video Q&A.
- Managed data preprocessing, feature engineering, and model evaluation workflows.

EDUCATION

Intermediate - Computer Science

Government Degree Boys College, Karachi

01/2024 - 01/2026 Karachi, Pakistan

- Studying Computer Science with self-directed learning in Python, machine learning, and AI application development.

PROJECTS

Personal Project

01/2024 - 01/2024

RAG-Based AI Teaching Assistant

- Built an intelligent document Q&A system using LangChain, FAISS, and Groq API for fast semantic retrieval.
- Implemented sentence-transformer embeddings to enable accurate, context-aware answers from uploaded content.
- Deployed FastAPI backend on Railway with a Streamlit frontend, achieving sub-2-second response times.

Personal Project

01/2023

Resume Screening AI System

- Developed an automated resume screening system using TF-IDF vectorization and skill extraction, achieving 87% matching accuracy.
- Reduced manual screening effort by approximately 75% through automated candidate-to-job matching logic.
- Deployed via FastAPI REST endpoints with an interactive Streamlit frontend on Railway and Streamlit Cloud.

Personal Project

01/2023

Student Performance Predictor

- Built an XGBoost classification model predicting student performance with 84% accuracy using historical academic data.
- Implemented SHAP explainability and interactive visualizations to deliver transparent, actionable insights for educators.
- Deployed via FastAPI and Streamlit for real-time predictions and early identification of at-risk students.
